Programme Overview

Research Methodologies play vital role in many disciplines such as Computer Science, Engineering, Medicine, Social Science. The key objective of this two days Workshop is to provide hands on experience to the learners related to research methods so that they can design their own research proposals.

Research not only generates useful insight confidence but also acts as a stimulant for academic growth. Sound conceptual understanding of various research methods, research instruments tools and technique is an essential prerequisite for conducting empirical research.

For undergoing high quality research and writing good research paper one requires to collect, interpret and logically document the information. The art of drawing coherent conclusion, supported by appropriate research tools and reference citation is vital for quality research work. The recent innovation in statistical applications, availability of statistical software application allow scholars/researchers to test more complex, multi level and dynamic model.

The focus of the workshop is to familiarize the participants with the tools that can be used for conducting research with special emphasis on linking the entire research process right from problem definition, objectives hypothesis testing and literature review, measurement through questionnaire and analysis through appropriate technique.

Proper definition of a problem enables a research to set the frame work of research with clear concept clarity. A comprehensive literature review will identify the gaps in literature and help establish precise and measurable objectives. This will facilitate suitable hypothesis formulation along with checking for type-I and type-II errors. The workshop will empower the participant to design the entire research process with hands on practical inputs for each and every stage of research.
